

I am an XM radio listener. I do not support placing restrictions on their broadcast format. As a entrapenuer, I understand the risk, liability, and expected reward the XM promoters are facing. They have placed multi-million dollar satellites in orbit, marketed their idea, designed radios and receivers for a nominal cost, have not charged too much for their seervice, and offer an excellent choice of broadcasting. If traffic reports and weather reports are on a channel that does not interfere with my listening enjoment, then I have no problem with them offering an additionl service to their paying customers. I live in Idaho, and sometimes travel to remote areas where there is no local radio. That is the primary reason I bought XM radio, so I could receive music statewide, even in remote locations. I would also like to receive weather reports. Please reject the NAM petitio 04-160.
